Department of Radiodiagnosis & Imaging

Interventional radiology is a growing speciality of radiology in which both vascular and nonvascular diseases are treated percutaneously by minimally invasive approaches using small catheters and catheter based instruments without the need for large surgical incision or general anaesthesia. The procedures are usually performed under local anaesthesia by means of radiological imaging techniques using X-rays, fluoroscopy, ultrasound or computed Tomography (CT).

These procedures offer a cost - effective alternative to certain conventional medical and surgical treatments in some clinical disorders. The procedures are attended with less risk and decrease hospitalization time. Frequently interventional procedures are the only viable therapeutic option for critically ill patients unable to tolerate a surgical procedure. The following are performed in the Departments of Radiodiagnosis and Imaging:

VASCULAR INTERVENTIONAL PROCEDURES

- Peripheral vascular disease - Percutaneous Angioplasty of peripheral vessels and stenting
- Intraarterial thrombolysis
- Reno vascular hypertension - Percutaneous renal angioplasty and stenting
- Epistaxis - Embolisation of Juvenile nasopharyngeal angiofibromas
- Hemoptysis - Bronchial artery embolisation
- Menorrhagia - Embolisation of fibroids
- Embolisation of vascular malformations in head & neck and extremities
- IVC filter insertion
- Permacath placement for hemodialysis

NON VASCULAR INTERVENTIONAL PROCEDURES

- USG guided / CT guided
 - Pleural / Ascitic fluid tap
 - Pig tail drainage of collections / Abscess
 - FNAC / BIOPSY of liver, Breast, Intraabdominal mass lesions
 - Percutaneous transhepatic biliary drainage
- Celiac plexus and Sympathetic block
- Fallopian tube recanalisation
- Stereotactic Breast Biopsy
- Percutaneous Vertebroplasty in Osteoporosis & Metastatic vertebral lesions
- Radiofrequency ablation of primary and Metastatic hepatic tumours
